

## Reach Truck Attachments

Reach Trucks are industrial equipment used for loading and storage in certain establishments that maintain storage of supplies to finished goods on a pallet which are then placed into elevated shelving units. This loading apparatus helps businesses securely and effortlessly amass and retrieve loaded pallets whilst ensuring sufficient storage of commodities that are not immediately needed.

Normal reach vehicles are built with a mounted rigging mechanism on the front of the vehicle. Telescoping forks are able to travel up and down on this mounted rigging. A system utilizing hydraulics enables the worker pick up and even reposition the load over the outriggers. This design offers a more level balance of the weight and will allow for simpler maneuvering between the stockroom shelves and narrow aisles.

When loading pallets on their specific shelves, the hydraulics can be used to slide and swing the pallet into position. This device is diminutive enough to fit into an aisle less than 10 feet across without many complications so long as there is nothing protruding from any shelves.

There are several distinctive designs of reach truck on the market. The simplest unit is a stand up model that you can slide the forks under the pallet and then transfer it to a different location for storage, then slide it into place. Generally this variety of reach truck is beneficial for shelving units that are only one pallet deep. A double-reach vehicle works in the same essential manner as the stand-up type but uses telescopic forks that are long enough to slide a pallet into shelves that accommodate two pallets. Straddle reaches are an alternative reach truck variation. This type of reach truck slides under the pallet and is additionally able to grab the sides as well. The straddle reach unit is useful when grasping the sides of the pallet and goods will not result in damage. They allow easy pallet retrieval of a pallet that may be 4th or 5th in line and are useful when the shelving units are within reach in more than one direction.

Manufacturing facilities, warehouses and even material companies normally employ one or more types of reach truck. They can be used to stockpile pallets of finished merchandise, storing provisions, materials, equipment, and to maintain the upkeep of storage units is common practice. Reach trucks are incredibly straightforward machinery to control to help make good use of your time and current storeroom space.
