

Information on Forklift Work Platforms

A Forklift work platform attachment can be used to transport personnel from one point to another. The attachment allows for movement in a safe and efficient way. The work platform attaches to the forklift by inserting forks into fork pockets and chaining the platform to the forklift. A forklift platform has a handrail which is approximately 42 inches high. Hand rails are placed on 3 sides of the work platform. A 5 foot high expanded metal backing takes up the 4th side.
